...omitted...

[0016] Examples of a resin material for the washing nozzle include, but are not limited to, an acrylonitrile-butadiene-polystyrene copolymer resin (ABS), polypropylene resin (PP), polyethylene resin (PE), polyethylene terephthalate resin (PET), polybutylene terephthalate resin (PBT), polyethylene naphthalate resin, polyamide resin (PA), polyacetal resin (POM), polytetrafluoroethylene resin (PTFE), tetrafluoroethylene-hexafluoropropylene copolymer resin (PFEP), and tetrafluoroethylene-perfluoroalkylvinyl ether copolymer resin (PFA).

[0017] Metals used as the washing nozzle can be used without any limitation, provided that they are anticorrosion alloys such as a stainless alloy and brass. Any metals that are not corrosive-resistant can be used, provided that they are metal-plated.
